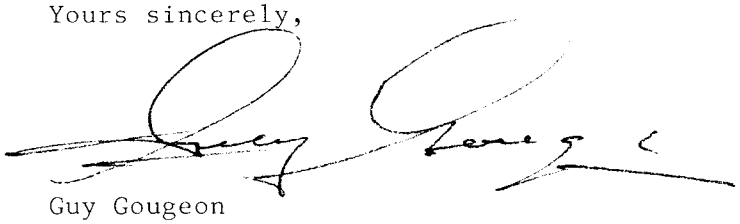
Dear Mr. Brown:

In response to your inquiry of May 17, 1989 to Mr. Juneau, the Broadcast Centre in Toronto will comply with Treasury Board's directives and incorporate Ontario Building Code standards for barrier-free design (Section 3.7). The standards assure access to the building for the physically disabled, whether employees or members of the public. Work areas and other facilities will be barrier-free.

Provisions will be made for not only those in wheel chairs, but also persons with visual and hearing impairment. In addition, others with reduced physical capacity such as the elderly will have the benefit of barrier-free access. We have every assurance from the architects, Bregman & Hamann/Scott Architects Associates that rigourous standards will apply to such things as parking, circulation, elevators, working surfaces, counters, telephones, drinking fountains and washrooms.

I hope this answers your question and that you will contact me if I can provide further information. Thank you for your interest in this exciting project.

Yours sincerely,



Guy Gougeon
